## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 15-35 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Resolving the igniting means and preventing plasma in the same instance is critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976).

Using broadest reasonable interpretation, plasma is clearly defined as “a highly ionized gas containing an approximately equal number of positive ions and electrons” The patent to Ward clearly shows by bombarding the air/fuel with microwave pulses, ions are inherently created in the cylinder chamber and inherently create a combustible plasma mixture or plasma flame (See Col. 3, Lines 35-50).

Currently, the claim language states that the air/fuel mixture has already ignited due to the microwave pulses but this limitation is at odds with preventing a formation of plasma. In essence, without a highly ionized air/fuel mixture (i.e. plasma), it is nebulous how the plasma mixture is prevented.

### ***Response to Arguments***

Art Unit: 3747

Applicant's arguments with respect to claims 15-35 have been considered but are moot in view of the new ground(s) of rejection.

### ***Applicant's Arguments***

Applicant has cancelled claims 1-14 and added claims 15-35.

### ***Examiner's Response to Arguments***

Applicant has to resolve the 112 rejection dealing with the prevention of or without plasma and still ignite a fuel/air (i.e. plasma) with microwaves pulses. If Applicant can resolve the 112 issue, Examiner believes the claimed subject matter is allowable.

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be

Art Unit: 3747

calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
